

SVEN'S DECISION TABLES

(for Beginning and Intermediate Bridge Players)

Are you blinded by Bridge Science? Even if you are no longer a beginner, you may still be struggling to remember the most basic aspects of this magnificent game? Are you too short of time to read through any of the myriad of Bridge books available in this world? If your partner makes a gambling 3NT opening, for example, would you know what to do or where to look it up?

Would you like a Shortcut?

Sven's Decision Tables might be just what you are looking for. A compact, concise and easy-to-follow method to help you make bids your partner will understand – and right there at the Bridge table.

Sven is not a Bridge expert. He does not even consider himself a Bridge teacher. He is an engineer, a computer programmer and a skilled technical writer who decided to uncover some of the logic behind commonly used Bridge bidding conventions and put his findings in an accurate and convenient reference document small enough to find space on the Bridge table. He considers the document to be a practical tool, not a book.

Sven's Decision Tables could be called a “cheat sheet”, but it is much more than that. It is clearly structured and goes into much more depth than most other documents of this nature. Above all, the tables help not only you but also your partner to follow the logic behind the bids. Cheating? Hardly, and you'll find that it works!

Sven's Decision Tables cover 5-Card Major Bridge bidding and is compatible with recognised text books such as Paul Marston's “The Language of Bidding” as well as with Helly Kemp's “The 35 Steps”.
